WARNING: Read this manual in its entirety before using this product. Improper use could result in damage to the product or lead to injury.
**PACKAGE CONTENTS**

1. Right pedal
2. Left pedal
3. Pedal washers (pair)
4. Cleats (pair)
5. Cleat mounting hardware
6. Batteries (2-AAA)
7. Pedal Identification Card (not pictured)

**TOOLS REQUIRED**

- 2.5mm hex key
- 6mm hex key
- 8mm hex key (Allen wrench)

**CHAPTER 1: PEDAL SPECIFICATIONS**

CHAPTER 2: INSTALLATION AND REMOVAL

PEDAL INSTALLATION

Note: PowerTap P1 pedals do not have flats on the pedal axle. An 8mm hex key must be used to secure pedal to the crank.

Before installing the pedals apply a light coat of grease to the threads on the axle. We recommend a heavier, water repellent grease like Park Tool’s PPL-1 or Phil Wood’s waterproof grease. If installing pedals into a carbon crank use the included pedal washers to reduce the potential for damage to the threads to the crank. To install the right pedal thread the RIGHT pedal into the drive side crank arm. The drive side crank arm has a right-handed thread. Using the 8mm hex, turn the axle clockwise when viewed from the pedal side of the crank. Tighten the pedal to the torque specification recommended by the crank manufacturer. To install the left pedal thread the LEFT pedal into the non-drive side crank arm. The non-drive side pedal has a left-handed thread. Using the 8mm hex, turn the axle counter-clockwise when viewed from the pedal side of the crank. Tighten the pedal to the torque specification recommended by the crank manufacturer.

CLEAT INSTALLATION

Note: PowerTap P1 pedals must be used with the included cleats. They are NOT compatible with other similar looking cleats like Look Keo.

Align the holes on the cleat with the embedded nuts on the sole of the shoe. Next, install the rectangular washers and bolts but do not fully tighten. Align the cleat to your preferred position and tighten each of the bolts to 4-6 ft lbs.

TENSION ADJUSTMENT

The release tension can be adjusted to suit your needs. Using a 2.5mm hex wrench adjust the release tension by turning the release tension adjustment screw as indicated by the arrows on the pedal claw. Turn the screw counter-clockwise to increase release tension and clockwise to decrease release tension. The indicator on the rear of the claw shows relative position of MIN/MAX release tension. Do not try to turn the screw past the MIN (bottom) or MAX (top) position as shown by the indicator.

Note: Cleats need to be replaced periodically based on individual rider use. If cleats are showing signs of wear or are not engaging and disengaging from the pedal replace them in a timely manner.
CHAPTER 3: PAIRING

PEDAL SLEEP AND WAKING
After 4 minutes without movement the pedal goes to sleep to conserve battery life. Wake the pedal up by spinning the pedal several times.

The pedal has a two stage wake up procedure to prevent battery drain during transport.
- Initial wake (dose mode): When pedal is spun only once. Goes back to sleep after 10 seconds of no movement.
- Full wake: Looks for continued rotation after initial wake within 10 seconds.

PAIRING
The pedals are factory paired to each other during the production process. They operate in a master/slave configuration. The right pedal (slave) is permanently paired to the left pedal and transmits data to it during activity. The left pedal (master) combines its data with the data of the right pedal and transmits the combined data to the receiving unit. Only the left pedal (master) can be paired to a display unit. Display units will not be able to pair to the right side pedal. For pairing instructions specific to your receiving device see your display unit’s instructions for pairing.

To pair:
1. Awake both pedals by spinning them a few times individually. Upon waking the green and red LED will illuminate. Then the green LED will blink every 2 sec when functioning normally.
2. Go to the SENSORS screen on your display and select POWER SENSOR from the menu and initiate the pair. Note: this can take up to 60 seconds.
3. When the ID from the appropriate sensor shows on the display screen select this sensor by pressing the ENTER button. Then activate the sensor. (ANT+ ID>ACTIVATE SENSOR)

Bluetooth SMART and ANT+ - The pedal broadcasts data using Bluetooth Smart and ANT+ simultaneously. You can pair your pedal to any device using either of these wireless protocols.

Bluetooth Smart
Bluetooth Smart is the low energy version of Bluetooth wireless technology. Learn more about this technology visit www.bluetooth.com

ANT+
ANT+ is a low energy form of wireless technology used in many sport electronics. To learn more about ANT+ visit www.thisisant.com
CHAPTER 4: SETTING CRANK ARM LENGTH

CRANK ARM LENGTH
Crank arm length must be set prior to use in order to display and collect the correct power output. To set crank arm length enter the sensor menu on your display unit and input the crank arm length that the pedals are attached to. Pedals are set to 172.5mm by default.

INDEXING PROCESS
Each time the pedals are initially installed there is a one time indexing process that occurs during the first few minutes of pedaling (basically the pedals are finding where the pedal axel has been positioned in each crank arm). During this time the Power and Pedal Balance output will not appear accurate, typically reading low. There are two versions of this process—the long version and the short version. The long version occurs when you install the pedals and immediately begin to ride the bike. The “finding” of the index will typically take between 3 and 5 minutes of continued pedaling to complete. The short version of this process, referred to as “fast find” occurs when you manually zero the pedal calibration offset after installation and pairing but prior to riding. The Fast Find typically takes a minute or less. Again, the pedals go this process only once after each install.

CHAPTER 5: CALIBRATION AND MANUAL ZERO

CALIBRATION AND MANUAL ZERO
Each PowerTap P1 pedal is dynamically calibrated from the factory to the highest standard. Calibration values cannot be changed by the user. However, it is important to periodically zero the offset manually.

Before performing a manual zero unclip from the pedals and make sure there is nothing contacting either pedal. Navigate to the sensor screen on the Joule GPS+ or other head unit and select Calibration. Initially, numbers will display related to the previous zeroing of the calibration offset. With Manual Zero selected Press the ENTER button to zero the offset.

TEMPERATURE COMPENSATION
The PowerTap P1 pedals have active temperature compensation to avoid drifting power and inaccurate data as the environmental conditions around you change. Each pedal has temperature sensors at the point of force measurement that automatically accommodate for changes in temperature up or down. This ensures that you get uninterrupted, accurate data every time you ride.
FIRMWARE UPDATES
Firmware on the pedals can be updated wirelessly when new firmware releases are available. To enjoy the full capabilities of the P1 Pedals including ongoing enhancements and Over-the-Air firmware updates you must download PowerTap Mobile App from the App Store.

Note: PowerTap mobile is currently only available on iOS for iPhone 4s or later, iPod Touch 5th generation or later, or iPad Mini/iPad 3 or later.

To check for/or perform over the air (OTA) firmware update follow the steps below.

Bluetooth must be turned “on” on
1) your iOS device (iPhone, Touch, iPad).
2) Bluetooth must be turned “on” in the PTM app (see switch “Use BLE”; BLE= Bluetooth Low Energy).
3) Follow the onscreen directions on the next page.
From the Settings page in PowerTap mobile select Bike Setup.

From the Bike List choose the bike the pedals are under.

Make sure the pedals are awake indicated by the connected message next to the sensor. Note: Use BLE must be turned on.

Select the power sensor you would like to update.

Select Check for firmware update to see if one is available.

Select Update Firmware

If a new firmware version is available select More Info to update.

Firmware Update process will happen automatically.

Once firmware update is complete select OK.

Right and Left pedals must be updated individually. Follow the same process to update the other sensor.
CHAPTER 8: PRECAUTIONS

PRECAUTIONS
Avoid submerging pedals in water and direct high pressure water spray. Damaging chemicals like diesel, kerosene and other strong solvents are also potentially damaging.

⚠️ WARNING: Keep pedals away from strong magnets.

Some of the electronics inside the pedal are sensitive to strong magnets and if your pedals come in close contact with strong magnets they may begin transmitting abnormal data. If you think your pedals were exposed to the magnetic field of a strong magnet please contact customer service.

LONG TERM STORAGE
If the pedals will not be used for an extended period of time (2 months or more) remove the batteries to prevent excessive battery drain and potential battery vomiting.

CHAPTER 9: WARRANTY

WARRANTY
The PowerTap P1 pedal is warranted to the original retail purchaser to be free from defects in materials and workmanship. Warranty coverage is valid to the original purchaser only and proof of purchase will be required.

Electronics - 2 years

THIS WARRANTY DOES NOT COVER:
• Normal wear and tear.
• Any damage, failure or loss caused by accident, misuse, neglect, abuse, improper assembly, improper maintenance, or failure to follow instructions or warnings in Owner’s Manual.
• Use of products in a manner or environment for which they were not designed.

LIMITATIONS
The foregoing warranties are in lieu of and exclude all other warranties not expressly set forth herein, whether expressed or implied by operation of law or otherwise, including, but not limited to, warranties of merchantability or fitness for a particular purpose. Saris Cycling Group shall in no event be liable for incidental or consequential losses, damages or expenses in connection with its exercise products. Saris Cycling Group’s liability hereunder is expressly limited to the replacement of goods not complying with this warranty or, at Saris Cycling Group election, to the repayment of an amount of the purchase price of the exercise product in question. Some states do not permit the exclusion or limitation of implied warranties or incidental or consequential damages, so the preceding limitations and exclusions may not apply to you.

PROCEDURES
Warranty service will be performed by Saris Cycling Group or an authorized Saris Cycling Group Dealer. The original purchaser must provide proof of purchase. Service calls and/or transportation to and from the Authorized Saris Cycling Group Dealer are the responsibility of the purchaser.
• Saris Cycling Group will have the option to repair or replace any product(s) which requires warranty service.
• Saris Cycling Group will replace any unit that is structurally defective with a new unit or replace the unit with a unit of equal value.
• In the event a product cannot be repaired, Saris Cycling Group will apply a limited credit reimbursement toward another PowerTap product of equal or greater value.
